Many arrivals from the Maghreb but few asylum applications

Nationals of Morocco, Tunisia and Algeria have lodged surprisingly few asylum applications over the past year, based on the number of illegal border-crossings that were detected for these nationalities. In contrast, applications by West Africans were again high in May.

Analysis [released](#) by the European Asylum Support Office (EASO) shows that **about 37 800 applications for international protection were lodged in the EU+ in May 2021.**¹ This number was close to the relatively low level in April (+ 3 %).

The top origin countries in May were Syria, Afghanistan, Pakistan, Iraq and Nigeria. Afghans lodged more applications for the third consecutive month (5 100 in May, + 33 % since February 2021). With 900 applications in May, Georgia joined the 10 main origin countries for the first time in over a year.

Latest Asylum Trends

Some 37 800 asylum applications were lodged in the EU+ in May 2021, stable from April

The main countries of origin of applicants were Syria, Afghanistan, Pakistan, Iraq and Nigeria

EU+ countries issued some 41 500 decisions at first instance in May 2021

32 % of the decisions issued in May 2021 granted EU-regulated forms of protection

Some 361 300 cases were pending at first instance at the end of May 2021, down by 22 % from a year ago

Discrepancy between asylum applications and illegal border-crossings

Nationals of Morocco, Tunisia and Algeria have been the most prominent after Syrians in terms of illegal border-crossings detected at the external EU border over the past 12 months.² However, they surprisingly lodged fewer asylum applications during the same period than the number of detected illegal border-crossings. In contrast, asylum applications were higher than illegal border-crossings for all other main origin countries. **This suggests that many Moroccans, Tunisians and Algerians who entered the EU+ illegally have chosen not to apply for asylum**, possibly due to the low recognition rates for these nationalities.

Applications by West Africans back to peak value

West Africans³ lodged 5 500 applications in May, returning to the peak value of March 2021. While Nigerians (1 300) remained by far the largest group among West Africans, the increase was largely due to Senegalese (800, + 31 % from April). Ghanaians (200) lodged the most applications in more than a year and Malians (900) remained one of the 10 main nationalities, alongside Nigerians. The relatively high number of asylum applications by West Africans partly reflects increased irregular migration on the Western African route towards the Canary Islands.

As in April, **self-claimed unaccompanied minors lodged 1 500 applications in the EU+ in May 2021**. They represented 4 % of the total applications in May. Similar to previous months, more than two fifths were from Afghanistan. Bangladeshis have become the third largest group, after Afghans and Syrians.

Substantial decrease in decisions issued by EU+ asylum authorities

EU+ asylum authorities issued some 41 500 first instance decisions in May. This was substantially lower than in April (- 17 %) as far fewer decisions were issued on repeated applications, which had been numerous in recent months. **Despite the decline, first instance decisions still exceeded applications**. At the end of May 2021, about 361 300 cases were still pending at first instance. **Similarly low levels of the backlog at first instance last occurred in 2014**.

The recognition rate⁴ in the EU+ returned to 32 % in May 2021. In March and April, it had been only 27 % because high numbers of first instance decisions on repeated applications were rarely positive. In May,

recognition rates were especially high for Eritreans (80 %), Syrians (75 %) and Somalis (59 %).
